

PERA
THE INNOVATION NETWORK

Innovation & Innovative Products Seminar and Exhibition

Pera, Pera Innovation Park, Melton Mowbray, Leicestershire LE13 0PB.
on 8th November 2007 at 9.30am - 3.30pm.

Free Innovation Seminar and Exhibition

On November 8th, the IPHE will be jointly hosting an Innovation Event at Pera's head office in Melton Mowbray. The event will consist of a series of seminars (please see information below) and after lunch there will be several Low Heat demonstrations.

A number of innovative products will be on display in the exhibition, which opens at the same time as registration - 9.15am. Refreshments and lunch will be available, free of charge. The seminars start at 10am.

Open innovation

Led by Pera, an innovation company, there will be a discussion on the funding mechanisms to combat the global problem of climate change and how local, national and EC funding can help to achieve the European targets.

Green Installers

Blane Judd, chief executive of The Institute of Plumbing and Heating Engineering will share his thoughts on how the qualified installer can help to lead the way in renewable energy.

Air toilet

Garry Moore will be talking about a product that has taken five years to develop. Propelair® is a totally new approach to WC operation. It combines the convenience of a conventional WC with the water saving and performance benefits of air assisted flushing.

Air source heat pump

Air Source Heat Pumps are becoming an increasingly popular choice for home heating. But what makes it such a viable heating alternative, and how does it work? Trianco Heating Products Limited, will be giving the answers!

Heat recovery from showers

Warmit is primarily designed to be used with showers where it recovers the heat lost down the plughole when you have a shower. This session will cover specific Warmit variants for a number of different applications.

Low Heat

The Low Heat project is drawing to an end. Led by the IPHE in partnership with Pera, the original brief set by the European Union was to prove in principle that enough energy could be recovered from wastewater to have a significant impact on energy efficiency and the environment. This final section of the seminar will focus on the development of the project and what has been achieved.

For further details of the Low Heat device please visit: www.lowheat.iphe.org.uk.

Book now!

There will be plenty of time for questions after each session and the opportunities to speak to the people who will be exhibiting their products. It is anticipated that there will be a high demand for places, so please complete the booking form overleaf and send to the Institute of Plumbing and Heating Engineering as soon as possible. Booking forms are also downloadable from www.iphe.org.uk.

Your place will be confirmed in due course.

Free lunch and refreshments included!
